

SYSTEM ADMINISTRATOR (M/F)

FULL-TIME POSITION AT KINEXON IN THE HEART OF MUNICH (MAXVORSTADT)

ABOUT US

We build state of the art sensor networks and web based applications for industries like manufacturing, logistics, sports & media. Core of our solution is a cutting edge radio technology for high precision localization and motion sensing of objects and people. Our awarded solution is a key technology for the Internet of things and an enabler for the smart factory of the future. Become an integral part of KINEXON and take on early responsibility in a young and dynamic company with flat hierarchies. Our team is engineering driven and passionate about solving challenges and building great things.

IN A NUTSHELL

As a fast-growing company, our infrastructure needs to keep up. We use automation wherever possible to streamline our operations. Always trying to find the best match for our specific needs, we employ both existing tools and build proprietary solutions. Our offered products either run on small servers specifically designed for the customer or on enterprise IT infrastructure managed by our customers. Therefore, we need intelligent solutions that scale both up and down. Additionally, our internal network becomes increasingly critical. We run internal services for source control, continuous integration, automated configuration, deployment, and more. In close collaboration with the development team, these services should be further developed and optimized.

WHAT YOU WILL DO

- Take responsibility for our internal network and server infrastructure and the network of VPNs we use to deploy and monitor our installations on customer sites.
- Work closely with our customers to find solutions for installing and updating our software in their IT landscape.
- Improve our configuration and deployment automation tools (we use them extensively) as well as our monitoring infrastructure.
- Play a vital role in building a sysadmin / DevOps team that works closely with our developers.

WHAT WE ARE LOOKING FOR

- Experience in running mission-critical server infrastructure.
- Solid know-how regarding network administration (including IPv6), VPN, Virtualization, Security, Linux configuration and monitoring.
- Experience in running scalable web applications, including automated deployment and backup is beneficial.
- A good understanding for software development in general, which is required for working closely with our development team.
- Working knowledge in bash and at least one other scripting language (Python, Perl, etc.).

WHAT YOU CAN EXPECT

- International team of passionate colleagues and tech enthusiasts with great team spirit and hands-on mentality.
- Outstanding career and development opportunities due to our strong growth and a steep learning curve.
- Be part of fascinating system demonstrations & launch events with renowned customers around the globe.
- Startup feeling and a lot of fun at various team events around food, sports, party, or the annual "Oktoberfest".
- Competitive payment with bonus opportunity
- And of course a lot of tasty coffee, fresh fruit and delicious sweets.

READY TO MAKE A DIFFERENCE AND SHAPE THE INTERNET OF THINGS?

Apply now! We are looking forward to receive your application (cover letter, CV, references and certificates) including your earliest start date! Please send your application to jobs@kinexon.com (contact: Lena Weber).
